Executive Summary

WarrenAI

Comcast Corporation (NASDAQ: CMCSA) is a leading diversified telecommunications and media conglomerate operating primarily in the United States and Europe, offering broadband, wireless, cable, and entertainment services through brands including Xfinity, NBCUniversal, Peacock, and Sky.

The most transformative development for Comcast is its announced tax-free spin-off of NBCUniversal and Sky into a separate publicly traded company, expected to close in approximately one year. The connectivity business will represent roughly 68% of pro forma 2025 revenue and ~90% of EBITDA ($32B) , while NBCUniversal will account for 32% of revenue and just 10% of EBITDA ($4B). Shares surged ~23% on the announcement, with Deutsche Bank upgrading the stock to Buy with a $32 target. Michael Angelakis will lead Comcast post-separation, Mike Cavanagh will head NBCUniversal, and Brian Roberts will retain voting control through super-voting shares at both entities.

In **Q1 2026** , Comcast reported EPS of $0.79, beating estimates by 9.72%, and revenue of $31.46B, surpassing forecasts by 3.59%, boosted by the Milan-Cortina Winter Olympics and Super Bowl LX. Despite the beat, *adjusted EBITDA declined 9% year-over-year* due to NBA contract costs, and the stock fell ~6% post-earnings. Broadband subscriber losses narrowed by 117,000 year-over-year — the first such improvement since Q4 2020 — while wireless added a record 435,000 net lines. Peacock reached 46 million paid subscribers with revenue up 71%, and is expected to approach profitability in Q2 2026 .

Valuation metrics appear compelling: the stock trades at a **P/E of ~4.5x** , EV/EBITDA of ~4.6x, and a 5.65% dividend yield with a 6-year growth streak, well below its estimated fair value of $37.38. However, *15 of 23 analysts revised EPS estimates downward over the past 90 days* , and net income is expected to decline in FY26. The median analyst target stands at $32.10, implying meaningful upside from current levels. Technical signals remain bearish near-term, while the spin-off catalyst and wireless growth trajectory provide a constructive longer-term outlook.

Latest Insights

Warren AI

Bull Case

- The announced tax-free spin-off of NBCUniversal and Sky is expected to unlock significant shareholder value by allowing the connectivity business — generating ~90% of EBITDA — to trade at a higher multiple as a pure-play broadband and wireless company.
- Broadband subscriber losses narrowed by 117,000 year-over-year in Q1 26, the first improvement since Q4 20, signaling that the go-to-market pivot toward simplified pricing and bundled wireless is gaining traction.
- Wireless added a record 435,000 net lines in Q1 26, reaching 9.7 million total at only 16% penetration of the domestic broadband base, representing a substantial long-term growth runway with improving margins and churn benefits.
- Peacock reached 46 million paid subscribers with revenue up 71% year-over-year and is on track to approach profitability in Q2 26, a major milestone validating the streaming strategy.
- The stock trades at deeply discounted valuation multiples — P/E of ~4.5x, EV/EBITDA of ~4.6x, and a 5.65% dividend yield — well below its estimated fair value of $37.38, with a median analyst target of $32.10 implying significant upside.
- Theme Parks delivered 33% EBITDA growth in Q1 26, driven by Epic Universe, with further expansion planned including the Universal Kids Resort in Frisco, TX and a new UK resort, reinforcing the segment as a high-margin growth driver.

Bear Case

- Broadband ARPU declined 3.1% in Q1 26 and further pressure is expected in Q2 26, driven by simplified pricing, free wireless line bundling, and the absence of a rate increase, weighing on EBITDA growth.
- Adjusted EBITDA declined 9% year-over-year in Q1 26, primarily due to the first-year costs of the new NBA contract, and 15 of 23 analysts revised EPS estimates downward over the past 90 days, with net income expected to fall in FY26.
- Fiber overbuilds now cover approximately 55% of Comcast's residential footprint, and fixed wireless access providers continue aggressive marketing, creating sustained competitive pressure on broadband subscriber trends and pricing power.
- Peacock posted a $432 million quarterly EBITDA loss in Q1 26, and despite approaching profitability, sustained profitability in a saturated streaming market is not guaranteed once major event tailwinds fade.
- The spin-off introduces execution risk, including new leadership at both entities, regulatory and board approvals, and uncertainty around investor sentiment during the transition; Comcast is also temporarily suspending its share repurchase program.
- Short-term obligations exceed liquid assets, and a current ratio below 1 alongside a high debt-to-equity ratio of ~1.01 raises liquidity concerns, particularly in a challenging macroeconomic environment.

Additional Insights

- Sky agreed on July 6, 26, to acquire ITV's broadcast channels and streaming service for £1.6 billion, creating an entity controlling ~70% of the UK linear TV advertising market and reaching over 20 million households, though the deal faces lengthy antitrust review.
- Comcast's convergence ARPA stands at ~$85, roughly half that of telecom competitors, underscoring the significant revenue upside as wireless penetration deepens and free lines convert to paid relationships in H2 26.
- The company returned $2.5 billion to shareholders in Q1 26 alone ($1.25B buybacks + $1.2B dividends), and has returned $11 billion over the trailing 12 months, reflecting strong capital discipline despite the ongoing strategic transition.
- Management expects to convert a significant majority of free wireless lines to paid relationships in H2 26, which should serve as a tailwind to both wireless revenue and broadband ARPU stabilization.
- Deutsche Bank upgraded CMCSA to Buy post-spin-off announcement, shifting to a sum-of-the-parts valuation methodology, with Evercore ISI noting the stock was trading at just 4.3x EV/EBITDA and 5.7x P/FCF on 27 estimates before the surge.

SWOT Analysis

WarrenAI

Strengths

- Comcast's connectivity business generates approximately 90% of consolidated EBITDA (~$32B), providing a highly cash-generative and defensible core business anchored by an extensive hybrid fiber-coax and DOCSIS 4.0 network.
- The wireless segment has demonstrated consistent growth, adding record lines in Q1 26 at just 16% penetration of the broadband base, offering a long runway for margin-accretive subscriber growth.
- Comcast has maintained dividends for 19 consecutive years with a 6-year growth streak and a current yield of 5.65%, supported by strong free cash flow generation of $3.9B in Q1 26 alone.
- Theme Parks are a high-margin growth engine, with Epic Universe driving strong per-cap spending and attendance, and multiple international expansions underway to sustain long-term growth.

Weaknesses

- Broadband ARPU declined 3.1% in Q1 26 with further pressure expected in Q2 26, reflecting the cost of the go-to-market pivot and free wireless bundling, which is compressing near-term EBITDA margins.
- Peacock continues to generate significant operating losses ($432M in Q1 26), and while profitability is approaching, the path to sustained profitability in a competitive streaming market remains uncertain.
- Short-term obligations exceed liquid assets, and the company carries a relatively high debt-to-equity ratio of ~1.01, limiting financial flexibility and raising liquidity concerns.
- Comcast has historically faced customer satisfaction challenges in its cable and internet services, contributing to churn and making competitive retention more costly.

Opportunities

- The planned spin-off of NBCUniversal and Sky is expected to unlock valuation upside for both entities, allowing the connectivity business to trade as a pure-play and NBCUniversal to pursue media partnerships more aggressively.
- Wireless penetration at just 16% of the domestic broadband base represents a substantial growth opportunity; converting free lines to paid in H2 26 is expected to materially boost convergence ARPA and revenue.
- Business services revenue grew 6% in Q1 26, and the upcoming T-Mobile MVNO launch for mid-market and enterprise customers adds a differentiated capability to compete across all business segments.
- Sky's acquisition of ITV's channels and streaming for £1.6B could create a dominant UK media platform controlling ~70% of linear TV ad revenue, significantly expanding Sky's strategic position in Europe.

Threats

- Fiber overbuilds now cover ~55% of Comcast's residential footprint, and fixed wireless access providers continue aggressive pricing and marketing, creating sustained pressure on broadband subscriber volumes and ARPU.
- The accelerating cord-cutting trend continues to erode traditional cable TV subscriptions, reducing video revenue and putting pressure on the bundled service economics that historically supported broadband retention.
- Macroeconomic headwinds — including reduced consumer spending, lower advertising budgets, and potential international travel slowdowns — could negatively impact parks attendance, ad revenue, and broadband subscriber retention.
- Regulatory scrutiny of the Sky-ITV deal and potential future broadband pricing regulations or structural separation mandates could materially impair Comcast's business model and valuation.

Earnings Call - Q1 2026

04/23/26 | WarrenAI

- Q1 26 EPS of $0.79 beat the $0.72 estimate by 9.72%, and revenue of $31.46B exceeded the $30.37B forecast by 3.59%, driven primarily by the Milan-Cortina Winter Olympics and Super Bowl LX ('Legendary February').
- Adjusted EBITDA declined 9% year-over-year, reflecting peak NBA contract cost dilution in Q1 26; management expects this to be the high watermark for NBA-related dilution.
- Free cash flow of $3.9B was generated in the quarter, with $2.5B returned to shareholders ($1.25B buybacks + $1.2B dividends); net leverage stood at 2.3x.
- Broadband losses narrowed by 117,000 year-over-year — the first improvement since Q4 20 — while wireless added a record 435,000 net lines, reaching 9.7 million total at 16% penetration.

Bullish Highlights

- Peacock added 2 million net subscribers in Q1 26, reaching 46 million paid, with revenue up 71% year-over-year; management expects Peacock to approach profitability in Q2 26.
- Theme Parks revenue grew 24% and EBITDA increased 33% in Q1 26, with Epic Universe driving higher per-cap spending and attendance across the Orlando resort.
- 'The Super Mario Galaxy Movie' crossed $750M globally, making it the biggest film of the year worldwide, with the franchise now totaling $2B at the global box office.
- Record advertising sales of ~$2B over the 17-day 'Legendary February' stretch; Media revenue increased over 60% in the quarter, with underlying (ex-events) growth of 13%.
- Premium wireless plan (Premium Unlimited) now accounts for ~30% of postpaid phone connects, and the new Mobile Plus plan — the first to include lifetime device protection — was launched to further strengthen the value proposition.

Bearish Highlights

- Broadband ARPU declined 3.1% in Q1 26, reflecting simplified pricing, free wireless line bundling, and the absence of a rate increase; management guided for incremental ARPU pressure in Q2 26.
- Connectivity & Platforms EBITDA declined 4.7% in Q1 26, with management acknowledging this is an investment period and that pressures will persist into Q2 26 before relief is expected later in the year.
- Peacock posted a $432M EBITDA loss in Q1 26, consistent with NBA cost dilution, and Media EBITDA was a loss of $426M; Q1 26 represented peak dilution from NBA rights amortization.
- Osaka parks are experiencing pressure from China-related inbound travel trends, and Beijing parks face a challenging macroeconomic environment, partially offsetting strong domestic performance.

Q&A Highlights

- On broadband competition (MoffettNathanson): Management confirmed improvement across all competitive environments (fiber, FWA, satellite), with roughly half of Q1 26 broadband improvement tied to Legendary February promotions and half to organic execution improvements.
- On wireless strategy (Citigroup): Management highlighted ~90% traffic offload via Wi-Fi, record Q1 line adds, ~30% of connects from existing mobile customers adding lines, and the upcoming T-Mobile MVNO for business customers as key competitive advantages.
- On full-year broadband trends (UBS): Management expects year-over-year improvement in broadband subscriber losses for the full year, though more than half of Q1's benefit was tied to the one-time Legendary February investment.
- On macro and parks (JPMorgan): No significant domestic parks impact from macroeconomic pressures observed to date, though management acknowledged risks from gas prices and airline costs; fiber overlap is approximately 55% of the residential footprint.
- On free-line conversion (Goldman Sachs): Early cohorts show a significant majority converting to paid relationships; this conversion in H2 26 is expected to provide a direct tailwind to broadband ARPU and convergence revenue.

Misses

- Despite beating EPS and revenue estimates, Comcast's stock declined ~6.16% to $27.56 in pre-market trading and further to $27 in subsequent sessions, reflecting investor concerns about long-term broadband growth and ARPU trajectory.
- Adjusted EBITDA declined 9% year-over-year, a significant miss relative to investor expectations, driven by NBA contract costs and the deliberate go-to-market investment in simplified pricing and free wireless lines.
- Broadband ARPU declined 3.1% and management guided for further pressure in Q2 26, disappointing investors who had hoped for a faster stabilization of the connectivity segment's revenue profile.

Top News, last 60 days:

[Comcast shares surge 23% on plan to spin off NBCUniversal and Sky into separate company]

June 29, 2026

- Comcast announced on Monday, June 29, 2026, a taxfree spinoff expected to close in approximately one year, separating into two independent publicly traded companies: a connectivity provider and a media entity containing NBCUniversal and Sky.
- Comcast shares surged 23% on Monday, June 29, 2026, while Charter Communications and Liberty Broadband both soared over 20% on the same day.
- The connectivity business will account for roughly 68% of pro forma 2025 revenue and 90% of EBITDA ($32 billion), while NBCUniversal will represent 32% of revenue and 10% of EBITDA ($4 billion).
- Comcast will retain up to a 19.9% equity stake in NBCUniversal for up to a year postspin and is temporarily suspending its share repurchase program.
- Evercore ISI noted Comcast was trading at 4.3x EV/EBITDA and 5.7x P/FCF on 2027 estimates before the announcement, with room to run despite Monday's surge past $28 per share.

Importance - 9/10 Positive

[Comcast to Split NBCUniversal and Sky in Major Media-Telecom Separation]

June 29, 2026

- Comcast will split into two publicly traded companies through a spinoff of NBCUniversal and Sky, separating its broadband business from its media and entertainment operations, with the taxfree separation expected to close in a year.
- Shares rose nearly 8% on Monday, June 29, 2026, after falling more than 17% yeartodate through Friday, June 26, 2026.
- Mike Cavanagh will run the new NBCUniversal while Michael Angelakis will lead Comcast as CEO; Brian Roberts will remain actively involved in both companies and retain voting control through supervoting shares.
- Comcast will keep up to 19.9% stake in NBCUniversal for up to a year following the spinoff, which it plans to monetize over time.
- NBCUniversal's connectivity business generated $70.7 billion in 2025 (over half of total revenue), while media brought in $27.09 billion (21%), theme parks $9.84 billion, and studios $11.29 billion (9%).

Sky agrees to acquire ITV's broadcast channels and streaming for £1.6 billion, creating British TV champion

July 06, 2026

- Comcast's Sky agreed on Monday, July 6, 2026, to buy ITV's broadcast channels and streaming service for £1.6 billion ($2.13 billion), combining Britain's biggest freetoair commercial broadcaster with the leading payTV business.
- The merged entity would control approximately 70% of the UK linear television advertising market, including thirdparty contracts, and reach over 20 million households.
- ITV will receive £1.2 billion in cash plus up to £200 million in an earnout dependent on 2027 advertising performance, and will distribute around £950 million to shareholders.
- ITV will remain as a standalone production business with a minimum £2.1 billion spending commitment from the merged company over 20282032, and will receive Love Productions as part of the deal.
- ITV shares traded up 1.2% to 83 pence on Monday, July 6, 2026, while the deal faces lengthy antitrust review and public interest tests.

Deutsche Bank Upgrades Comcast to Buy on Planned Split into Two Public Companies

June 30, 2026

- Deutsche Bank upgraded Comcast Corp (CMCSA) from Hold to Buy with a price target of $32.00, down from $34.00.
- The upgrade is based on Comcast's announcement that it is planning to split the company into two publicly traded companies: Comcast (Cable & Technology) and NBCUniversal (Media, Theme Parks, and Sky).
- Deutsche Bank changed its valuation methodology to a sumoftheparts analysis from its prior marketbased DCF model due to the planned split.
