Executive Summary

Warren AI

Albemarle Corporation (NYSE: ALB) is a leading global specialty chemicals company focused on lithium, bromine, and catalyst production, with operations spanning North America, South America, Australia, and beyond.

Q1 2026 marked a dramatic financial turnaround, with net sales of **\$1.4 billion rising 33% year-over-year**, adjusted EBITDA of \$664 million surging 148% YoY, and EPS of \$2.95 crushing the \$1.31 forecast by over 125%. The **Energy Storage segment was the standout driver**, with net sales up 70% and EBITDA up 196%, while the Specialties segment contributed a solid 12% revenue increase. Management raised full-year 2026 Specialties guidance to \$1.3–\$1.5 billion in net sales and \$225–\$275 million in adjusted EBITDA.

On the **balance sheet front**, Albemarle repaid \$1.3 billion of debt in Q1 2026, reducing net debt-to-EBITDA leverage to **1x** and lowering annual interest expense by ~\$60 million. Moody's responded by upgrading the company's outlook to *stable* from negative while affirming its Baa3 rating. Liquidity stands at approximately \$2.6 billion including cash and revolving credit availability.

Analyst sentiment has turned increasingly constructive: Citi upgraded ALB to Buy with a \$225 target, UBS ranks it among its top lithium picks, and 12 of 13 EPS revisions over the past 90 days have been upward. The consensus analyst price target is ~\$204, with a high of \$260. Forward P/E ratios of 9.4x (FY26) and 8.8x (FY27) suggest the stock trades at a **meaningful discount to fair value** of ~\$159.

Key **risks** include ongoing lithium price volatility, Middle East supply chain disruptions estimated at \$70–\$90 million in full-year costs, execution risk on ramp-ups at Greenbushes CGP3 and Wodgina, and the potential for renewed oversupply if idled capacity returns. The company also carries a negative trailing EPS of -\$0.79, reflecting the difficult 2025 environment.

Looking ahead, **battery energy storage demand is growing ~40% annually**, EV adoption continues to expand globally, and Albemarle's brownfield expansion pipeline—including Wodgina, Greenbushes, Salar de Atacama DLE, and Kings Mountain—positions the company well for the next phase of lithium demand growth with minimal near-term incremental CapEx.

Pro Tips

Tips that distill complex financial data into concise, actionable investment insights.

- High shareholder yield
- Has raised its dividend for 32 consecutive years
- Net income is expected to grow this year
- 5 analysts have revised their earnings upwards for the upcoming period
- Has maintained dividend payments for 33 consecutive years
- High return over the last year
- Liquid assets exceed short term obligations
- Analysts predict the company will be profitable this year
- Not profitable over the last twelve months
- Trading at a high EBIT valuation multiple
- Operates with a moderate level of debt

Latest Insights

WarrenAI

Bull Case

- Q1 2026 EPS of \$2.95 beat forecasts by 125%, with revenue up 33% YoY to \$1.4B and adjusted EBITDA up 148% to \$664M, demonstrating a powerful operational turnaround.
- Energy Storage segment net sales surged 70% YoY in Q1 26, with EBITDA nearly tripling (+196%), driven by higher lithium pricing (~\$17/kg average realized) and 14% volume growth.
- Albemarle repaid \$1.3B of debt in Q1 26, reducing net leverage to 1x and cutting annual interest expense by ~\$60M, with no major debt maturities until late 2028.
- Citi upgraded ALB to Buy (Jun 26) with a \$225 target, projecting battery ESS output to grow ~35% YoY to 950 GWh in 26 and ~37% to ~1,300 GWh in 27, with a projected lithium market deficit of ~4% in 26.
- Battery energy storage demand is growing ~40% annually per Fastmarkets, diversifying lithium demand away from lumpy EV cycles and providing a more stable structural growth driver.
- Full-year cost and productivity improvement target of \$100M–\$150M is on track, with \$40M already achieved in Q1 26, helping offset \$70–\$90M in Middle East supply chain disruption costs.

Bear Case

- Albemarle carries a negative trailing EPS of -\$0.79 and was unprofitable over the last twelve months, reflecting the severe revenue compression from ~\$9.6B in FY23 to ~\$5.1B in FY25.
- Lithium price volatility remains the primary risk; UBS has revised its 26 and 27 lithium price forecasts downward, and any renewed oversupply—particularly from reopened Chinese mines—could pressure realized prices.
- Middle East geopolitical tensions are estimated to cause \$70–\$90M in full-year supply chain disruption costs, with back-half Specialties visibility limited and bromine prices already easing from recent peaks.
- Greenbushes ore quality is expected to dip over the next two quarters before recovering in Q4 26, and a JV partner has publicly raised safety and operational concerns that differ from management's characterization.
- Full-year energy storage volume guidance is flat YoY, constrained by resource ramp timelines at CGP3 and Wodgina rather than demand, limiting near-term volume upside.
- CapEx guidance of \$550M–\$600M for 26 remains substantial, and execution risk on complex project ramp-ups (Kings Mountain, DLE at Salar de Atacama) could result in delays or cost overruns.

Additional Insights

- Moody's changed Albemarle's outlook to stable from negative in May 26, affirming Baa3/P-3 ratings, with adjusted leverage improving to 1.8x for the 12 months ended Mar 31, 26 vs. 4.5x a year prior.
- ALB has raised its dividend for 32 consecutive years and maintained payments for 33 consecutive years, with a current yield of ~1.21%, reflecting long-term capital return commitment despite recent earnings volatility.
- The stock trades at a forward P/E of 9.4x (FY26E EPS of \$14.21) and 8.8x (FY27E EPS of \$15.15), with consensus analyst targets ranging from \$83 to \$260 and a median of ~\$204, suggesting meaningful upside from current levels.
- Kings Mountain recently received federal mining permits, a key milestone toward becoming one of the few domestic U.S. lithium sources, potentially benefiting from IRA 'Buy American' provisions and NDAA military battery supply requirements.
- Albemarle's pilot DLE plant at La Negra, Chile has operated for over a year achieving >94% lithium recovery, with commercial permitting initiated for up to six DLE trains—a capital-efficient path to expanding Salar de Atacama output.

SWOT Analysis

Warren AI

Strengths

- World-class, low-cost lithium resource base including brine operations at Salar de Atacama (Chile) and a 49% stake in Greenbushes (Australia), the highest-grade, lowest-cost spodumene asset globally.
- Dominant market position in bromine with demonstrated pricing power and a diversified Specialties segment serving electronics, semiconductors, oil & gas, and building/construction end markets.
- Strong post-Q1 26 balance sheet with net leverage of 1x, ~\$2.6B in liquidity, and no major debt maturities until late 2028, providing substantial financial flexibility.

Weaknesses

- High sensitivity to lithium price volatility; the company was unprofitable in FY24 and FY25 (negative P/E ratios), with trailing EPS of -\$0.79 reflecting the depth of the prior downturn.
- Specialties segment faces back-half 26 uncertainty due to Middle East disruptions, easing bromine prices in China, and limited visibility beyond mid-year into oil & gas and petrochemical end markets.
- Capital-intensive business model with \$550M-\$600M in guided FY26 CapEx, and execution risk on multi-year ramp-ups at Greenbushes CGP3, Wodgina Train 3, and greenfield projects like Kings Mountain.

Opportunities

- Battery energy storage system demand growing ~40% annually provides a structural, globally distributed demand driver that is less volatile than EV unit sales cycles.
- Brownfield expansion at Wodgina, Greenbushes, and Salar de Atacama (via DLE) offers high-single-digit volume growth potential post-27 with relatively low incremental CapEx requirements.
- Kings Mountain mine and U.S. domestic lithium processing position Albemarle to capture IRA/NDAA-driven demand from U.S. automakers and defense applications, supported by \$240M+ in federal grants.

Threats

- Potential reopening of idled Chinese lithium capacity (e.g., CATL's Jianxiawo mine) or accelerated global supply additions from Australia, Chile, and Argentina could pressure lithium prices back toward oversupply.
- Geopolitical instability in the Middle East continues to disrupt bromine supply chains and raise raw material costs (notably sulfuric acid), with an estimated \$70-\$90M full-year impact in 26.
- Emergence of alternative battery chemistries (sodium-ion) and competition from integrated Chinese battery manufacturers developing internal lithium supply chains pose long-term structural risks to demand and pricing.

Earnings Call - Q1 2026

05/07/26 | WarrenAI

- Q1 26 net sales of \$1.4B rose 33% YoY; adjusted EBITDA of \$664M surged 148% YoY, with EBITDA margin expanding more than 20 percentage points versus the prior year quarter.
- Energy storage Q1 26 volumes were 53,000 tons LCE at ~\$17/kg average realized price; energy storage pricing increased 51% and volumes rose 14% YoY.
- Albemarle repaid \$1.3B of debt in Q1 26 using asset sale proceeds (Eurecat JV and Ketjen stake), reducing weighted average interest rate to ~3.1% and annual interest expense by ~\$60M.

Bullish Highlights

- CEO Kent Masters highlighted energy storage demand up 117% YoY, with customer order books at Asian battery companies full through early 2027, driven by grid reliability, renewables, and AI behind-the-meter storage.
- Specialties segment Q1 26 EBITDA rose 30% YoY on higher pricing and favorable product mix; Jordan Bromine Company JV fully recovered from late-25 flooding and continues to operate despite regional tensions.
- Greenbushes CGP3 is ramping on schedule with full capacity expected by year-end 26; Wodgina is operating all three trains with ore quality expected to improve in Q4 26 as the Stage 3 pit deepens.
- DLE pilot at La Negra has achieved >94% lithium recovery over more than a year of operation, with commercial permitting initiated for up to six trains at Salar de Atacama.

Bearish Highlights

- Full-year energy storage volume guidance held flat YoY, constrained by resource ramp timelines rather than market demand; Q4 26 volumes expected to be softer due to tough prior-year comps from inventory drawdowns.
- Middle East supply chain disruptions estimated at \$70–\$90M unmitigated full-year cost impact, primarily from sulfuric acid price increases affecting hard rock conversion economics.
- Back-half Specialties visibility is limited; management cited geopolitical uncertainty and easing Chinese bromine prices as reasons for caution despite a strong Q2 26 sequential outlook.
- Energy storage EBITDA margin expected to compress sequentially in Q2 26 due to normalization of spodumene inventory timing benefits and higher supply chain costs.

Q&A Highlights

- On buyer behavior at higher lithium prices: Management noted conversations are evolving but no dramatic change in behavior yet; strong pipeline of customers interested in both spot and contract discussions, with Albemarle being cautious on contract mix.
- On Greenbushes safety concerns raised publicly by a JV partner: Masters acknowledged safety is not at the desired level and improvements are underway, but stated the mine is operating to plan and CGP3 ramp is on schedule; declined to comment on partner's motivations.
- On lithium supply response at current prices: Masters noted most projects are just returning to the price levels used to justify them originally; no massive supply response expected, with African supply disruptions (Zimbabwe) seen as temporary negotiating positions.
- On balance sheet targets: CFO Neal Sheorey indicated net leverage could trend below 1x by year-end at current prices; company is deliberately maintaining a conservative balance sheet posture given recent cycle volatility.

Misses

- Diluted GAAP EPS of \$2.34 was below the adjusted EPS of \$2.95 reported, reflecting items excluded from the adjusted figure that investors should monitor for a complete earnings picture.
- Full-year energy storage volume guidance remained flat YoY despite strong Q1 demand signals, disappointing analysts who had hoped for an upward revision given robust ESS order books.
- Back-half Specialties EBITDA implied by the raised full-year guidance range suggests a meaningful step-down from Q1–Q2 levels, reflecting limited management visibility and ongoing geopolitical uncertainty in bromine markets.

Top News, last 60 days:

[Albemarle Q1 2026 earnings significantly beat expectations with EPS of \\$2.95 vs. forecast \\$1.31; revenue up 33% YoY to \\$1.4B](#)

May 13, 2026

- Albemarle reported Q1 2026 EPS of \$2.95, beating the forecast of \$1.31 by 125.19%, with revenue of \$1.4 billion exceeding expectations of \$1.32 billion by 6.06%.
- Net sales increased 33% yearoveryear, with energy storage segment up 70% and specialties segment up 12%; adjusted EBITDA reached \$664 million, up 148% YoY.
- The company repaid \$1.3 billion of debt during Q1 2026, reducing net debt to EBITDA leverage ratio to 1x and lowering annual interest expense by approximately \$60 million.
- Energy storage Q1 2026 sales volumes were 53,000 tons LCE at average realized price of approximately \$17/kg; company maintains fullyear volume guidance as flat YoY.
- Albemarle raised fullyear 2026 specialties guidance to net sales of \$1.3\$1.5 billion and adjusted EBITDA of \$225\$275 million, offsetting \$70\$90 million in supply chain disruption costs from Middle East tensions.

[Moody's Changes Albemarle Outlook to Stable from Negative, Affirms Baa3 Rating](#)

May 12, 2026

- On Tuesday, May 12, 2026, Moody's changed Albemarle's outlook to stable from negative while affirming its Baa3 senior unsecured rating and Prime3 commercial paper rating.
- Moody's adjusted leverage improved to 1.8x for the 12month period ended March 31, 2026, compared to 4.5x for the same period in 2025, driven by debt reduction and lithium price rebound.
- During Q1 2026, Albemarle reduced gross debt by \$1.3 billion using asset sale proceeds and cash on hand.
- At March 31, 2026, Albemarle had \$1.1 billion cash and full availability under its \$1.5 billion revolving credit facility, with maturity extended to October 2028 in March 2026.
- Moody's projects adjusted EBITDA of around \$1.4 billion for 2026, assuming lithium hydroxide and carbonate prices of around \$14 per kilogram for the remainder of the year.

UBS Names Lontown, IGO, and Albemarle as Top Lithium Stock Picks Despite Near-Term Headwinds

July 06, 2026

- UBS maintains a bullish longterm outlook on lithium mining stocks despite nearterm challenges including rising battery inventories, supply uncertainty, and weak new energy vehicle sales in China.
- UBS recently adjusted its lithium price forecasts for 2026 and 2027 downward to reflect current market conditions.
- UBS ranks Lontown as its top pick; Lontown reported Q3 fiscal 2026 positive net cash flow of 33 million AUD.
- IGO ranks second on UBS's list; IGO reported Q3 2026 revenue of AUD 120 million with operational challenges at its Greenbushes facility.
- Albemarle ranks third; the company reported Q1 2026 revenue of \$1.4 billion surpassing analyst expectations, and RBC Capital raised its price target citing improved growth outlook.
